Software Engineer with over four years of experience specializing in backend development, API design, and test automation. I currently work in the public sector with technologies such as PHP, Node.js, and Docker, while also having freelance experience developing applications to optimize processes for small enterprises. My freelance projects included planning, design, troubleshooting, maintenance, and cloud deployment on AWS (EC2, S3, Elastic Beanstalk, and related services).

Education

U.N.I.C.E.N (Universidad Nacional del Centro de la Provincia de Buenos Aires) — Tandil, Buenos Aires

University Technician in Network Programming and Administration — Graduation date: 06/2023

Development with Artificial Intelligence (Certificate)

Experience

SIU — Remote

Senior Software Engineer — 10/2021 - Current

Software Engineer with experience in modernizing legacy systems, specializing in the migration, Dockerization, and maintenance of production applications. I actively work on transforming monolithic architectures into containerized environments, improving system scalability, portability, and reliability.
I serve as a Technical Lead, coordinating a small team of developers, conducting code reviews, defining best practices, providing technical support, and making architectural decisions. I have a strong focus on clean code, performance, stability, and observability, with a DevOps mindset and a commitment to continuous improvement.

Freelance — Remote

Software Engineer — 10/2021 - Current

As a freelance software engineer, I specialized in developing applications to optimize and accelerate business processes for small enterprises. My role covered the full software development lifecycle.

- Collaborated with clients to understand requirements and translate them into efficient technical solutions.
- Built robust applications tailored to business needs, while proactively identifying and resolving technical issues
- Ensured continuous system performance, applying improvements and updates as businesses grew.
- Deployed and maintained applications on AWS using services such as EC2, S3, Elastic Beanstalk, and other AWS tools to guarantee reliability, security, and scalability.

Skills & Interests

- **Technical:** PHP - Laravel - NodeJS - JavaScript - TypeScript - Java - PostgreSQL - Bash - Python - Linux - Docker - AWS
- **Language:** Spanish (Nativo) - English (C1 - currently improving)
